DETAILED ACTION

Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

2. Claims 1, 9, 34 and 35 are rejected under 35 U.S.C. 102(b) as being anticipated by Nishi et al. (5,144,414).

Regarding claim 1, Nishi discloses a ghost-canceling device showing a receiving step (L1), an edge parameter-computing step (14), a synchronization-detecting step (15), and a ghost-canceling step (16-8, 12, 11).

Regarding claim 9, in addition of above, the synchronization signal in Nishi is a horizontal sync, such as claimed.

Regarding claims 34 and 35, Nishi inherently includes a means for storing the edge parameters.

Claim Rejections - 35 USC § 103

3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

4. Claims 19, 23, 24, 30, and 31 are rejected under 35 U.S.C. 103(a) as being unpatentable over Nishi et al. (5,144,414).

Regarding claims 19, 23, 24, 30 and 31, in addition of rejection above, Nishi does not specify the computing platform or processor as claimed. In any event, the invention of Nishi is operated in digital domain because the input signal is converted into digital signal by A/D converter 8. The Examiner takes Official Notice that using computing devices or processors for processing digital signals is well known in the art. Hence, it would have been obvious to one of ordinary skill in the art to employ computing devices or processors for carrying out the ghost canceling functions as claimed.

Allowable Subject Matter

5. Claims 2-8, 10-13, 20-22, 25-29, 32, and 33 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.
6. Claims 14-18 are allowed.

Conclusion

7. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Utsunomiya et al. (4,357,631) shows a differentiator 11.

Onishi et al. (4,389,623) shows a differentiator 5.
